

# UDUS IT COMPETE 2021

## SWEETECH PROPOSAL

### INTRODUCTION

We realized that most of our faculties/departments don't have their own websites for the benefits of students. Students without smartphones found it difficult to get urgent information easily. mostly, urgent information are mostly sent via Whatsapp or Facebook In which students without smartphones found it difficult to be informed.

But with the use of websites students can access the internet anywhere and anyhow to get information easily. We create a web application which has different features for the solution to this problem.

### OBJECTIVES

- To provide urgent information to signed-up members.
- To allow students to comment on a particular information on the website.
- It allows faculty or department to get biography of their students i.e when they signed up
- It gives students opportunity to know more about other students and the faculty or department excos
- Biography of ex-students will be saved for feature references on the platform
- It allows students to communicate among themselves.

### FEATURES

- Login/signup page: this is the page where students signup or login to access the website.
- Blog page: the page where latest news are upload so signed-up members can read and comment
- Chat page: where members can chat
- Biography page: where the biography of ex students is saved for every member to see and for future reference.
- Front page: where the image of the current V.C of the institution is uploaded with the Dean of Faculty, Head of department and the student excos of the year.

### GOALS

- Allows the members of the faculty/department to access the site for urgent information and also comment on a particular information
- Allows the members to chat with others on the platform
- Allows members to access the site to know the ex student of the faculty/institution.

### CONCLUSION

This website is of benefit to the students of Usmanu Danfodiyo University. We use Computer Science department as a sample on this project.
